DIGITAL SURVEILLANCE SYSTEMS

ISC's Digital Surveillance System technology far exceeds the antiquated capabilities of stand-alone DVRs by allowing users to flexibly configure a system with thousands of camera inputs and to manage live view, group, playback, authenticated export of video, PTZ control, analytics, remote view and more.

As a Pelco Dealer with Pelco-certified designers and technicians, ISC is able to provide its customers with the Scalable Endura IP Surveillance Platform, which accepts an unlimited number of high definition (HD) and megapixel cameras. The Endura system is an intelligent, easy-to-use approach to video security that provides greater control, enhanced operational flexibility, improved management and expanded recording, archiving and integration capabilities. Endura is ideal for complex gaming/casino environments, and its features ensure that all state requirements for resolution, frame rate, analytics and video retention can be met with ease.

ISC also offers the Pelco full-featured Digital Sentry Network Video management platform, the convenience and assurance of a robust network video recorder (NVR), analog camera support via optional direct-attached or network video encoders and support for hundreds of IP cameras. Digital Sentry offers the flexibility and convenience of a video management system (VMS) optimized to drive HD, IP and hybrid recording from one high-performance platform; it is ideal for gaming, hospitality, healthcare, corporate security and more. Whatever your video surveillance requires, ISC has the vision and expertise to help you meet those needs.

QUICK FACTS

- FLEXIBLY CONFIGURE A SYSTEM WITH THOUSANDS OF CAMERA INPUTS
- EXPANDED RECORDING, ARCHIVING AND INTEGRATION CAPABILITIES
- IDEAL FOR CASINO/GAMING ENVIRONMENTS
- SUPPORT FOR ANALOG AND IP CAMERAS
- MEETS ALL STATE-REGULATED REQUIREMENTS
